THE INNOVATIVE NEW MAGNETIC CABLE GUIDE

Part #'s
SJM2200/SDS SJM2200/MAS

*Available with either an SDS bit or Masonry bit

MagnaMole is the innovative new powerful, magnetic 'PUSH' tool for speeding up the installation of wires and cables through cavity walls and void spaces.

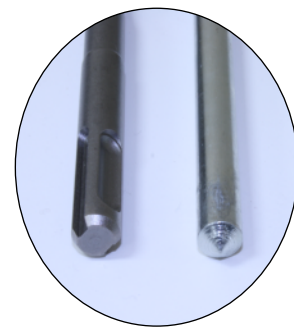

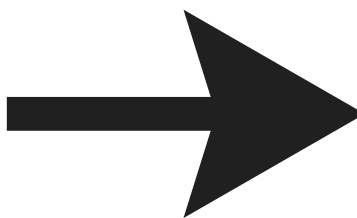

This unique insulated tool allows a single person to quickly thread cables through a wallspace, while protecting the user from the potential risks of an electric shock from any exposed wiring inside the cavity.

The Magnamole tool kit also includes a suitable size drill bit long enough to pass through most building cavity walls.

Ideal for any installer/contractor or handyman to keep on hand with their toolbox, the time savings alone will pay for itself over, and over again.

You can use MagnaMole for a range of applications:

- Telecommunications/ I.T. (Cat5e/Cat6/Cat3)
- Home entertainment (RG-6/Speaker wire)
- Domestic or commercial wiring (NMD,T90,TEW)
- Manufacturing (TEW, PANEL WIRE)
- HVAC (LVT)
- And more...

SDS Masonry

1 Drill a hole and remove the dust and debris.

2 Insert magnetic rod.

3 Screw the appropriate cap to the cable or wire end and align the magnets.

4 Push the cable into the hole, and through the other side of the wall.
